

Bio Maren Schinz

Maren Schinz is a scientist, patient entrepreneur, and founder of Beyond Diagnostics. Living with Type 1 diabetes, she knows what it means to depend on a life-saving medication like insulin every single day. With Beyond Diagnostics, she pioneers the world's first platform for real-time medication quality testing, starting with insulin and expanding to other fragile biologics.

Previously, she led the DCB Innovation Challenge, the world's largest award for diabetes technology, and supported hundreds of health-tech startups at the Diabetes Center Berne. She also lectures on Innovation and Co-Creation, advocating meaningful patient involvement in research and health-tech development. Maren combines deep pharmacological expertise with patient insight and a global vision: to make medication quality transparent, accessible, and non-negotiable.
